

Vision Hema[®] Remote

Remote access to blood smear
analysis results

Vision Hema®

Lab technician

Lab supervisor

1 Additional workplaces to improve efficiency

Laboratory or hospital internal communications, as well as communications between laboratories and hospitals are carried out in real-time. Specialists work with blood cell images captured by Vision Hema®, from anywhere. Independence of specialist's working location increases speed and efficiency.

2 Increase in laboratory throughput

Vision Hema® Remote allows, if necessary, an optimization of the personal workflow. Specialists have the opportunity to review blood cell images captured by Vision Hema® and process analysis results, both past and current.

3 Quality control and monitoring of laboratory workflow

Managers and supervisors monitor and control the correct operation and procedure of the analysis in the laboratory. All stages of the analysis are optimized and standardized: results and «flags» from hematology analyzers, blood smear preparation, analytical procedures, verification of results as well as printing of the report.

Vision Hema® Remote

Software for distant access to blood smear analysis results.

Vision Hema® database

MS SQL database is set-up at the hospital's server for Vision Hema® system. Vision Hema® Remote provides local or remote users an access to slides using a secured channel.

Remote training centre

An expert with his PC

4 Expert opinion

Keep in touch with colleagues who work in remote training centres by sharing clinical images. Assessment and expert opinion help in the interpretation of complex cases.

5 Quick access to analysis results

Database access allows a quick comparison of analysis results. Reviewing images from any location can accelerate decision-making in treating patients.

6 Improved cooperation and centralization of expertise

Use an existing PC. View the pre-classification results from one or more Vision Hema® systems. Remote verification, -correction and -consultation of blood smear analyses.
